

IndustrieCompany adds piping systems to the range of services

IndustrieCompany has once again perfectly complemented its proven range of services and now also offers the area of „media technology“ in addition to transport and handling systems for the steel industry. In fact, this new area of expertise is more of a gap-filler: **IndustrieCompany** puts itself in the excellent position of being able to offer another important component in large-scale projects or a separate service. Everything relating to **piping systems for air, oil and water** now comes from the same source.

NEW

This significant and exciting expansion of the portfolio is achieved by the **IndustrieCompany** in cooperation with the partners in the **KICK Group**, the group of medium-sized and owner-managed companies with joint headquarters in Willich, not far from Duesseldorf.

The **KICK Group** combines mechanics with electrics, hydraulics and pneumatics. It gets projects moving. With more than 160 employees and subsidiaries in Hagen as well as in the Netherlands, the Czech Republic, England and India, and through numerous trade partnerships, the **KICK Group** serves customers worldwide.

- Steel industry and rolling mills
- Pipe industry and bar mills
- Chemical industry
- pharmaceutical industry
- Food industry
- Compressed air trade
- and many more

Services of the KICK Group

The **KICK Group** is a reliable, energetic and flexible partner in mechanical and plant engineering as well as in compressed air and conveyor technology. It all depends on the community, because together the **KICK Group** gets projects moving.

Project management

Planning and coordination of all trades | interface and risk analysis | time and quality monitoring

Engineering

Design of plants and components | layout engineering in 3D | preparation of drawings | calculations | technical documentation

Manufacturing

Mechanical production | production of welded structures | steel construction (according to DIN EN 1090 EXC 2 and WHG)

Disassembly / assembly

Pre-assembly of assemblies and systems in the factory | disassembly and assembly of systems | Integration of new machines into existing systems

Refurbishing

Overhaul and reconditioning of existing production plants | analysis of weak points and „bottlenecks“ | concept development for performance and quality improvement

Maintenance

Implementation of preventive maintenance measures | repair work | maintenance work on own as well as third-party plants

Hydraulics / media

Design of hydraulic systems | planning of media lines | (pre-) manufacture of pipelines | pipe bending | on-site pipe fabrication

Electrics

Construction (EPLAN) | programming | control cabinet construction | conversions | modernizations and retrofits | commissioning
